

Weekly Report

2015.11.09-2015.11.15

1. Progress

This week I spent most of my time doing the Global Network Project. And my job in this project is to work on the physical map interfaces.

- add IP Address to the device point when zooming in to a certain level
- show domain names which the chosen device has visited. Make this function more interactive and make the ring size adaptable to the map size:

- revise some bugs, including problems with the info box in the up-right corner, position of the domain name ring, and so on.

2. To Do

- revise the remained bugs
- finish the brush function
